Railcar Derailment, Oxnard, Ventura County, SPILL: 18-3945

On 06/15/18 at 2229 hours, the California State Warning Center (CSWC) received a report from Union Pacific Railroad (UPRR) advising that one auto rack railcar derailed in the upright position due to rolling over a derail device.

- The railcar was not connected to a train at the time of incident.
- No releases occurred and no injuries were reported.
- Rerailment will begin 06/18/18 at 0600 hours.
- CSWC made notifications per SOP.

Virulent Newcastle Disease (vND) in Chickens, Los Angeles and San Bernardino Counties

The California Department of Food and Agriculture (CDFA) has detected virulent Newcastle Disease (vND) in chickens in Los Angeles and San Bernardino Counties.

Per the Cal OES Southern Region AREP on 06/14/18 at 0846 hours:

- CDFA and the U.S. Department of Agriculture (USDA) have scaled up their response to this incident, as more cases have been detected.
- CDFA confirmed there are no commercial premises currently involved and there is no public health risk due to this virus.
- Incident Management Teams (IMTs) are transitioning on 06/16/18. The IMT Red Team will start on 06/17/18.

Activations

- San Bernardino Operational Area (OA) EOC is activated to Level 3 (lowest level) and will continue to monitor the incident.

Deployments

- One (1) Cal OES Southern Region Senior ESC deployed to ICP as an AREP. Operational period of 0700-1900 hours.
- See Fire Activity Slides.

Cal OES Fire Preparedness Levels		
National	Northern California	Southern California
Preparedness Level 2	Preparedness Level 1	Preparedness Level 2
	Multi-Agency Coordination System MACS Mode: 1	Multi-Agency Coordination System MACS Mode: 1

Please note: The National and Regional Preparedness Levels are maintained by the National Multi-Agency Coordination (MAC) Group and are separate from Cal OES activation levels.

COASTAL REGION

Beaver, Vegetation Fire, San Benito County

Location: Coalinga Hwy x Airline Hwy, East of King City

Jurisdiction: State DPA, SRA

Start Date/Time: 06/12/18 at 1504 hours

Per Cal OES Duty Officers and ICS-209 as of 06/16/18 at 0556 hours:

- 215 acres grass, 80% contained
- Expected Containment: 06/18/18
- Fire is burning in steep and difficult terrain
- Minimal fire activity overnight
- Ground resources continue to improve and secure control lines

FIRE ACTIVITY

INLAND REGION

Tumbleweed, Vegetation Fire, Lassen County

Location: Hwy 395 x 1 mile SE of Litchfield, East of Susanville

Jurisdiction: Federal DPA, FRA/SRA, Northern California District BLM

Per Cal OES Duty Officers and ICS-209 as of 06/15/18 at 1552 hours:

- 674 acres grass and brush, 30% contained
- [Expected Containment: 06/17/18](#)
- No fire growth overnight
- Structures threatened
- Threat to Schaffer Mountain communications tower
- Sage Grouse habitat impacted
- Thunderstorms with erratic winds gust up to 35 mph predicted

SOUTHERN REGION

Euclid, Vegetation Fire, Riverside County

Location: Euclid Ave. x Hwy 71, 6 miles south of Chino

Jurisdiction: State DPA, SRA, Riverside Unit

Start Date/Time: 06/12/18 at 1430 hours

Per Cal OES Duty Officers and ICS-209 as of 06/15/18 at 1724 hours:

- 154 acres grass and brush, 85% contained
- [Expected Containment: 06/17/18](#)
- Crews continue to strengthen containment lines as fuels are receptive to spotting
- Southwest winds increased today with gusts to 20 mph
- 1 Cal OES Fire and Rescue Branch Assistant Chief (AC) assigned

WEATHER SYNOPSIS BY REGION

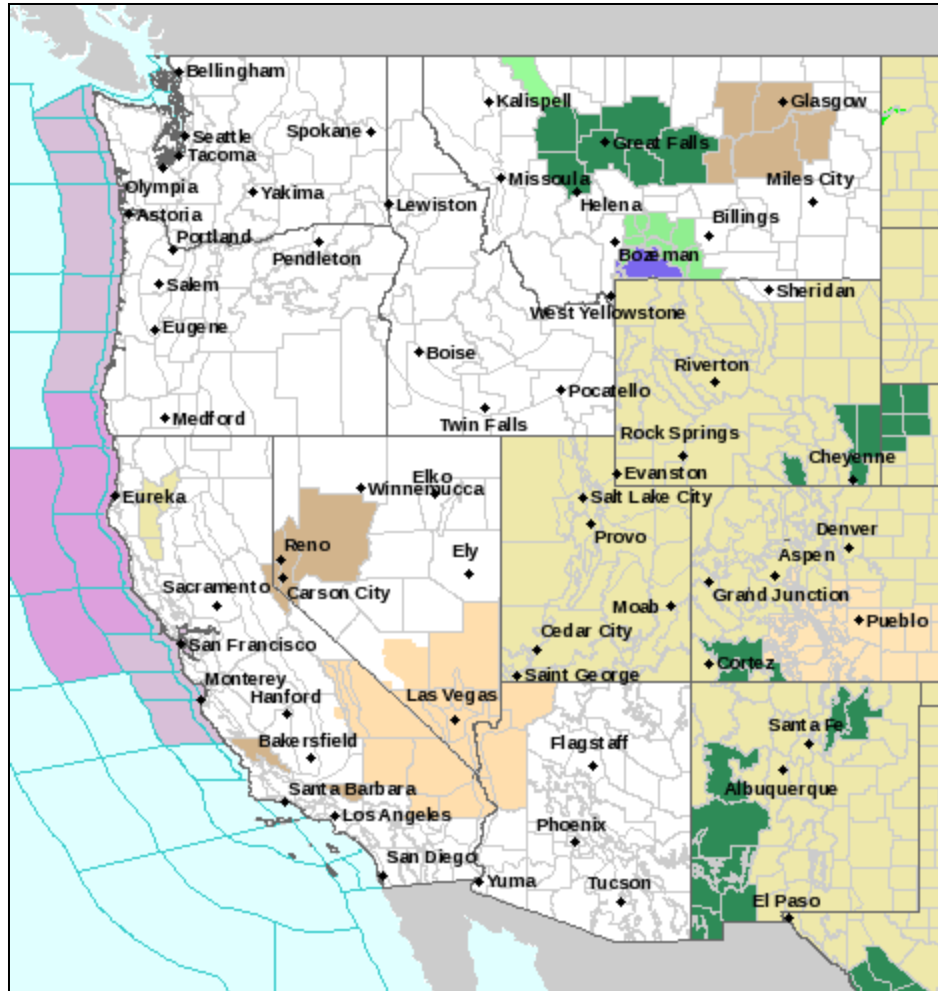

NORTHERN CALIFORNIA

A diverse weather pattern is shaping up across Northern California during the next 3 days. This is all due to the placement and slow progression of a cut off Pacific Low. The weather models have slightly sped up the timing of the exit of the low thus the main precipitation period appear to be today through Monday. This includes scattered showers and isolated thunderstorms favoring the NE quarter of the area. Thunderstorms would be slower to move thus some wetting results are expected but the system as a whole will be on the drier side. Other areas of the region would remain dry. There will be quite a temperature contrast with NE areas being the coolest thanks to abundant afternoon and evening cloud cover. The North Coast could actually experience above normal temperatures due to the initial wind flow there. The main weather story will be the variable winds, both speeds and directions due to the placement of the low pressure system. Today, gustier N-NW-NE winds will invade the North Coast, NW Mountains, Mid Coast to Mendocino and Sacramento Valley/Foothills. The lowest humidity alignment will be found within the Sacramento Valley where teens are expected and some gusts to 30 mph are possible. The wind gradient should relax slightly on Sunday although some breezy northerly and westerly winds should remain. The wind flow should increase a bit early next week as the low moves off to the east and gets absorbed back into the jet stream. Humidity values will gradually trend lower early next week as well. The extended forecast for the latter half of next week looks a little murky in terms of the pattern but suspect ridging will be the dominant feature with just a weak Pacific disturbance trying to alter that flow late week. High temperatures should trend back to near to above normal while the area remains dry for the most part.

SOUTHERN CALIFORNIA

An area of low pressure currently over British Columbia will drop south into Northern California by Sunday bringing significant cooling to the region. By Sunday, the coolest day of the week, maximum temperatures will be in the upper 50s and 60s across the mountains and 70s to low 80s in the valleys. Southwest to west afternoon and evening winds of 20 to 30 mph with gusts to 50 mph will surface across the desert passes through Sunday. The low pressure area will weaken and move east into the Great Basin bringing a slow warming trend to the region Monday through the end of next week. Southwest to west winds across the desert passes will decrease to 15 to 25 mph with gusts to 40 mph in the afternoons and evenings Monday through the end of next week. Minimum humidity will be mainly between 20% and 40% above and inland from the marine layer through the end of next week. The marine layer will become deep this weekend, with morning low clouds and fog making it over the lower coastal mountain slopes. Some light shower activity will be possible from the lower coastal slopes westward across both Central and Southern California Sunday morning. The marine layer will gradually shrink next week and morning low clouds and fog will not move as far inland. Isolated afternoon showers and thunderstorms will be possible over the Sierra Sunday through the end of next week.
